Rviz and Gazebo simulators

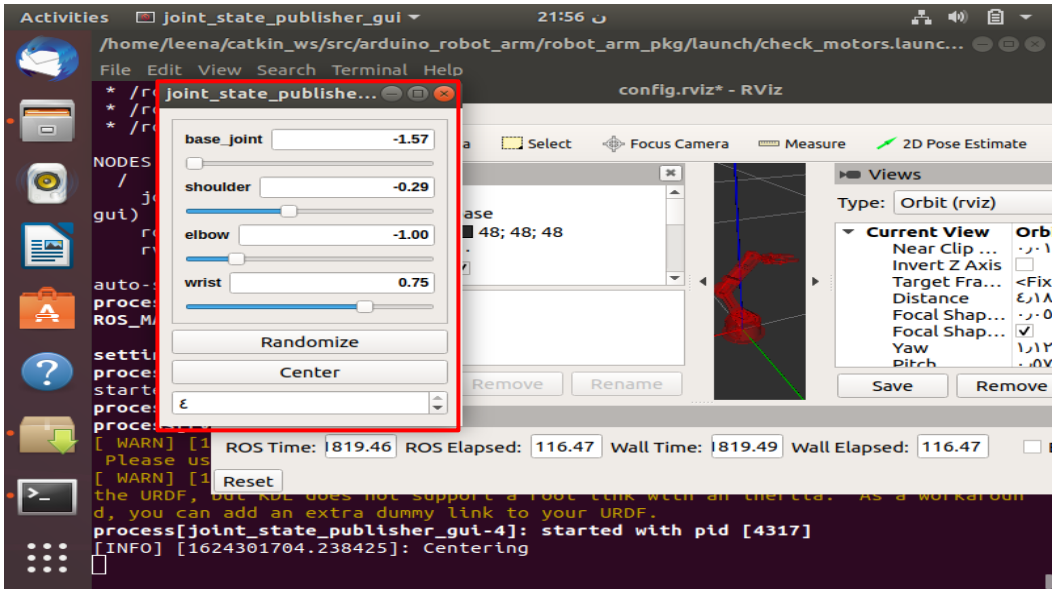
After download ROS, create a workspace, and install all packages that you need to execute and control robot arm you can use simulators such as Rviz to simulate the robot arm:

Run Rviz

- To open the Rviz simulator Write the command below on the terminal:

```
$ roslaunch robot_arm_pkg check_motors.launch
```

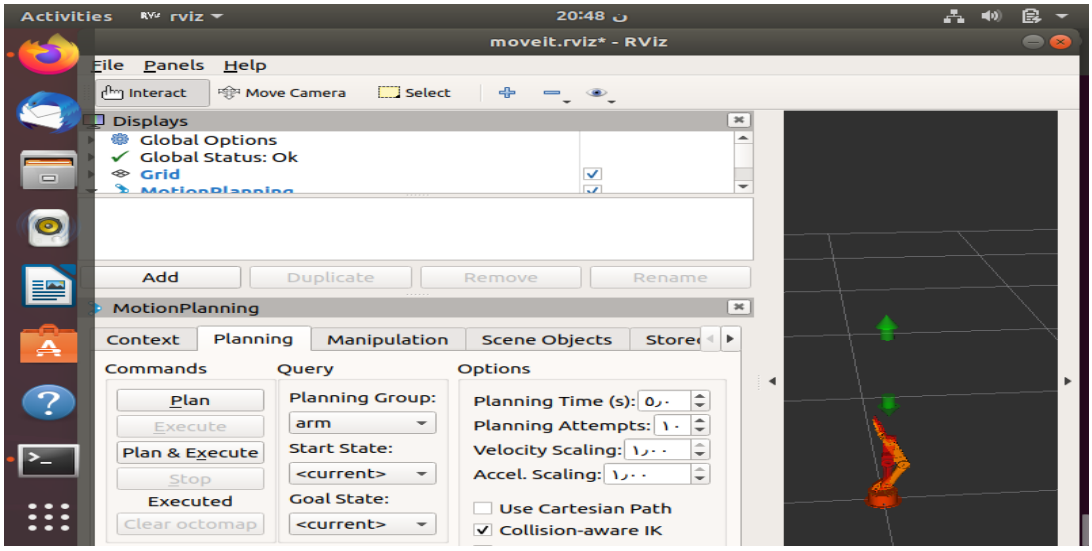
  - The robot arm is visible but it can't move yet, you can change the position on this window:



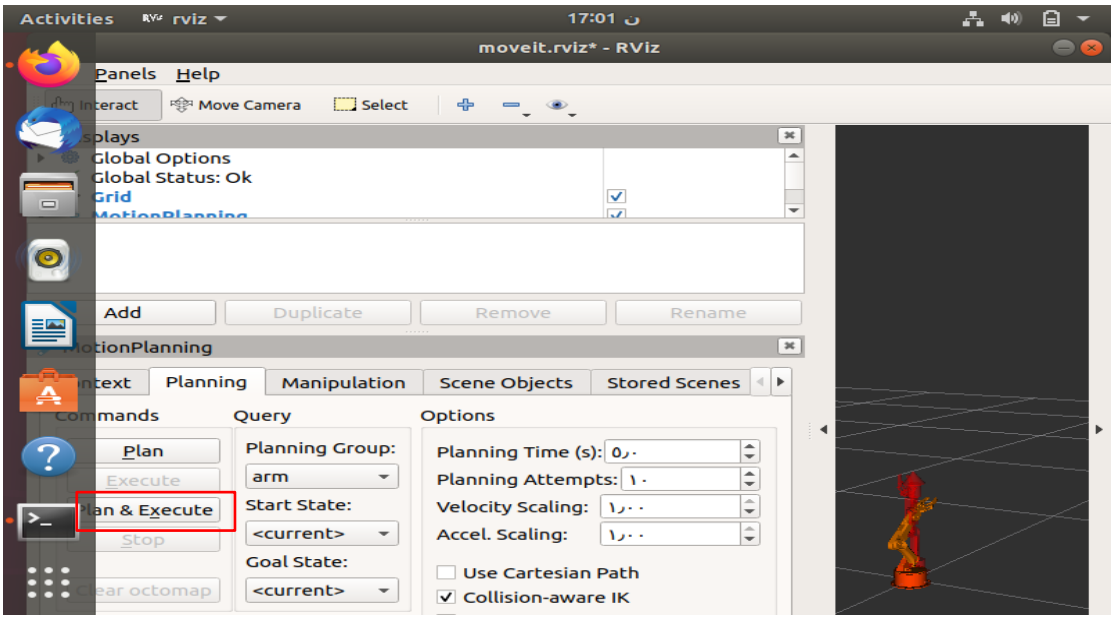
- To move and control the robot arm use MoveIt software. Enter this command in the terminal to open it:

```
$ roslaunch moveit_pkg demo.launch
```

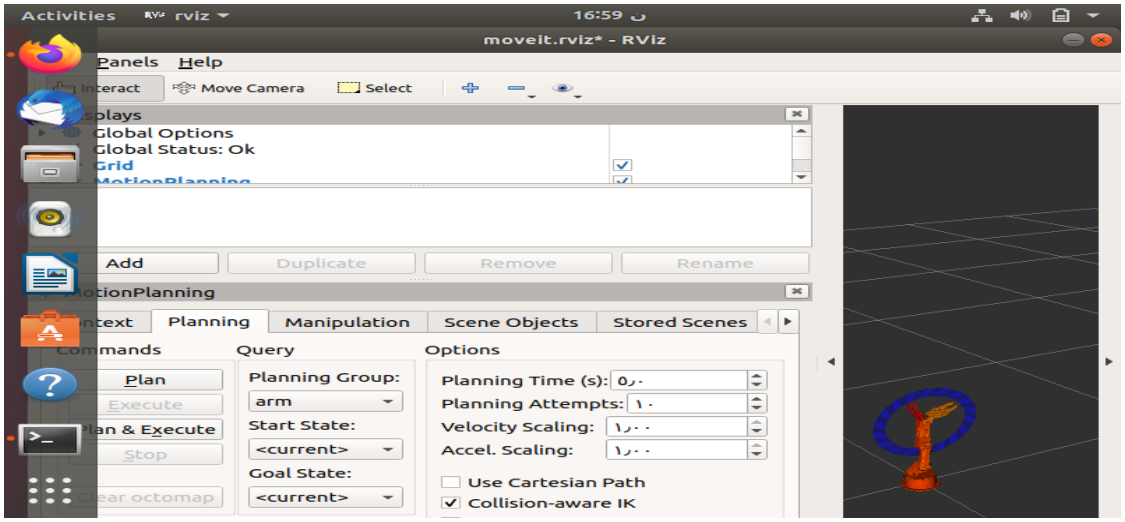
  - To move the elbow drag the green arrow up and down:



- To simulate the arm motion You can click plan & Execute:



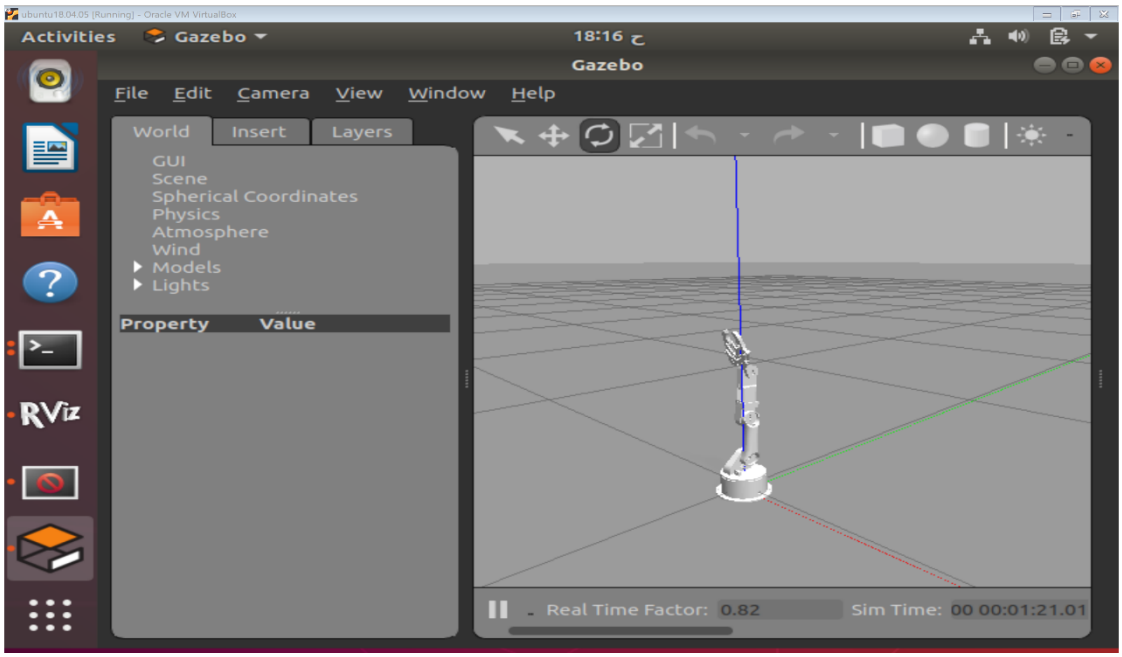
- To move the gripper move the blue ring in a circular motion:



Gazebo

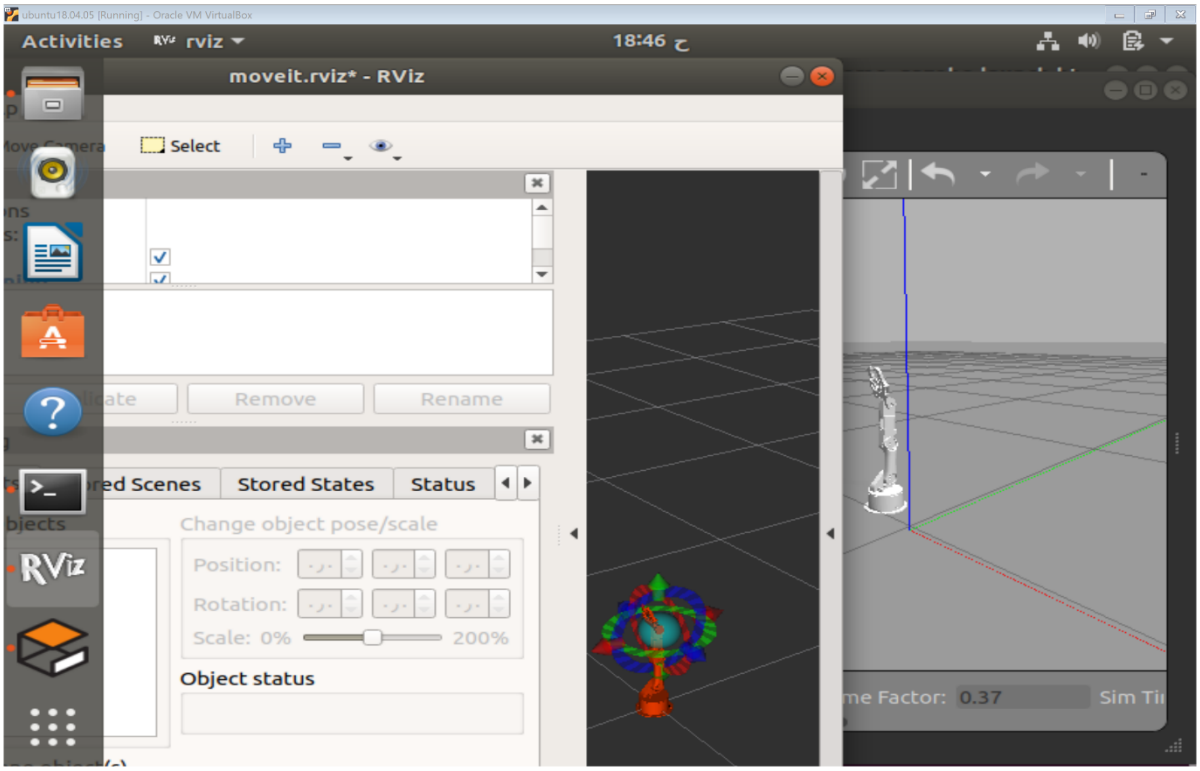
- **To open Gazebo enter this command:**

```
$ roslaunch robot_arm_pkg check_motors_gazebo.launch
```



- To open Rviz and Gazebo use this command:

```
$ roslaunch moveit_pkg demo_gazebo.launch
```



- You can move the arm in Rviz as we mentioned earlier and press plan & execute button to see the simulation on Gazebo:
